| <input type="checkbox"/> Loppers or Hedge Trimmers | <input type="checkbox"/> Paper Yard Bags |
| <input type="checkbox"/> Garden Gloves             | <input type="checkbox"/> Pruning Pole    |
| <input type="checkbox"/> Safety Glasses            | <input type="checkbox"/> Pruning Sealer  |
| <input type="checkbox"/> Extension Cord            | <input type="checkbox"/> Bow Saw         |
| <input type="checkbox"/> Rake                      |  |

### 3 Important Steps

- 1** Make sure your manual loppers or powered hedge trimmers are sharp before starting any pruning project. Ask about our sharpening service on manual loppers and pruners.
- 2** Use powered hedge trimmers or loppers for trimming and shaping light growth. For limbs greater than 1/2" thick consider using some hook-nose loppers or a saw. For taller tree limbs use a pruning pole to cut without using a ladder.
- 3** When pruning flowering trees and shrubs research the particular kind of plant for the best time to prune without damaging the plant or flower production. As a general rule of thumb it's best to prune after flowering is done for the season.
